elysion

❖❖ HOW DOES ELYSION LASER HAIR REMOVAL WORK?

Using a specific wavelength of light that is selectively absorbed by the melanin surrounding the hair follicle, the laser is applied to the skin and the heat is conducted down to the base of the follicle and coagulates or cuts off the blood flow to the follicle. At the same time the Elysion 'Cool Freeze' technology cools the skin to protect and avoid any damage to the surrounding skin. The hair will be destroyed and removed permanently and over the next week will fall out leaving the skin hair free and smooth.

❖❖ BOOK A CONSULTATION AND PATCH TEST

For a consultation and patch test, contact us at beauty@thenibblers.co.uk

❖❖ HOW MANY TREATMENTS ARE REQUIRED?

The visible hair will be removed with each treatment. A course of treatments is required as laser hair removal is effective on hairs in the growing stage or visible on the skin. At any one time only 30% of hairs in the skin are visible on the surface. Therefore, for maximum clearance additional treatments are required for each phase of hair growth.

Elysion's high power and pain free treatment of Elysion requires less treatments than older IPL or lasers which in some cases required 8-15 treatments. For most people Elysion achieves maximum clearance in just 6 sessions saving you time and money.

❖❖ HOW DOES TREATMENT FEEL?

Most clients find treatment comfortable as Elysion laser system incorporates advanced integrated cooling. Its patented 'cool freeze' skin cooling technology keeps the skin at a cool temperature throughout treatment protecting the skin and ensuring a painless treatment. Elysion also has a dynamic mode that is completely painless and can even be used on tanned skin.

❖❖ WHO IS SUITABLE FOR TREATMENT?

Elysion laser can treat all skin types effectively and safely including dark skin types and even tanned skin. We treat both men and women who wish to remove unwanted hair permanently. During your consultation we will ask you to complete a full health questionnaire to identify any contraindications.

If you suffer from Polycystic Ovary Syndrome (PCOS) we can treat effectively but you will require ongoing maintenance treatment.

❖❖ YOUR TREATMENT PLAN;

The first step is to book a consultation, so we can assess your suitability and answer any questions you may have. You will then receive a very clear costing based on area and time taken for treatment. Our prices are competitive against other clinics, who use older slower laser technology. Elysion is one of the fastest lasers for hair removal.

Prior to beginning your treatment course we will perform a test patch to ensure no adverse reactions and you may then book your first treatment after 24 hours. Treatment sessions will be scheduled approximately 5-8 weeks apart.
